

Week 7

This week in a nutshell:

We begin the half term by solidifying some key concepts that can be developed into tools for problem solving across a range of topics.

Question 1: Equivalent fractions

Question 2: Expressing as a percentage

Question 3: Linear equations

Question 4: Angles in a triangle

Question 5: Perimeter

There is a fundamental connection between fractions and percentages which can be explored as key skills are developed. The other topics are built upon over the half term, so dealing with any misconceptions that arise will really help.

This week's ideas for class discussion include:

Question 1: Equivalent fractions

- Why might it be an advantage to express a fraction using an equivalent form?
- Does using equivalent fractions change the size of the fraction?

Question 2: Expressing as a percentage

- Why do you think percentages are used?
- Can you give examples of how/where percentages have been used?

Question 3: Linear equations

- Is it possible for an equation to have more than one solution?
- Is it possible for an equation to have no solution?

Question 4: Angles in a triangle

- Using only a piece of paper, how could you show that the angles in a triangle add up to 180° ?

Question 5: Perimeter

- Can you think of a way to remember how to find perimeter?
